

# INSTALLATION INSTRUCTIONS

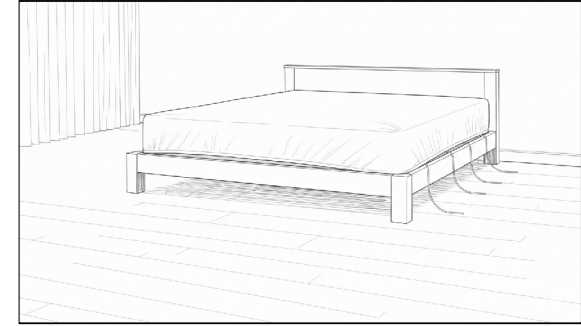

---

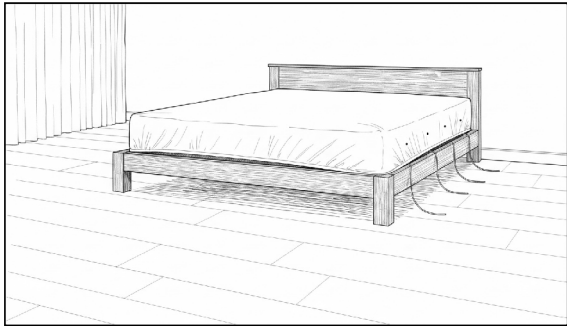

**1.** Remove the mattress. Lay the cords across the bed base. They should be positioned approximately equidistant from one another and at a suitable distance from the corners.

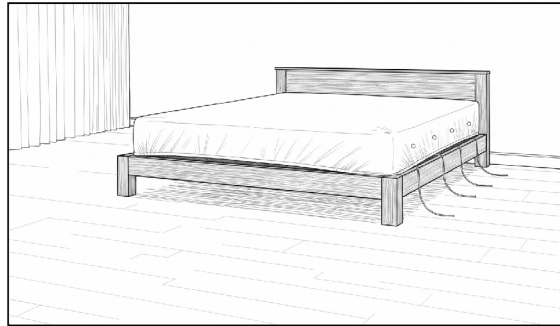

**2.** Place the mattress back in its normal position on top the cords and fit the sheet as you normally would.

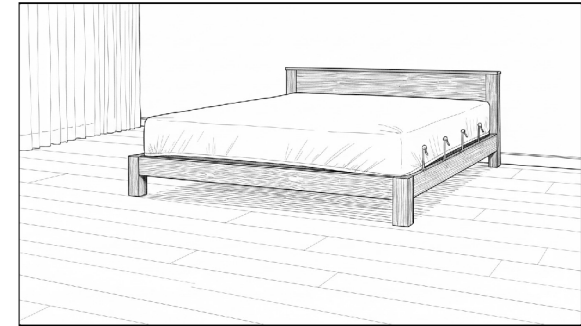

**3.** Using a marker, mark the positions where the buttons will be installed. These marks should align with each cord and be located halfway up the side of the mattress. Remove the sheet once the markings are complete.

**4.** Attach the buttons at the marked positions. The flat side of the button should be on the outside of the sheet, and the retaining rings on the inside. Use two rings per button, positioned opposite each other so that the staggered shapes interlock.

**5.** Place the sheet with the buttons already installed onto the mattress.

**6.** Tighten and wrap the cords around the buttons. A couple of turns are usually sufficient to maintain tension.
